Assignment -1

TITLE:- SOFTWARE DEVELOPMENT LIFE CYCLE (SDLC) – THE SIX PHASE.

Phase	Description (One Line)
1. Requirement Analysis	The project requirements are collected, analyzed, and documented based on the client's needs.
2. Planning	The project timeline, budget, resources, and development strategy are planned.
3. Design	The software's architecture, user interface, and database structure are designed before coding begins.
4. Development (Implementation)	Developers write the source code and build the software according to the approved design.
5. Testing	The software is tested to identify and fix errors, ensuring it works correctly and meets all requirements.
6. Deployment & Maintenance	The software is released to users, and regular updates, improvements, and bug fixes are provided after launch.

SDLC
(Software Development Life Cycle)
1
Requirement Analysis
Gather and analyze the requirements.
2
Planning
Define the scope, time, cost and resources.
3
Design
Create the system architecture and design.
4
Development (Coding)
Write the code and build the software.
5
Testing
Test the software to find and fix defects.
6
Deployment & Maintenance
Deploy the software and provide regular updates and support.
