ASSIGNMENT-2

TITLE :- Difference Between Agile and Waterfall Models

Topic	Agile Model	Waterfall Model
1. Development Approach	Agile follows an iterative and incremental approach, where the project is developed in small cycles called sprints.	Waterfall follows a linear and sequential approach, where each phase must be completed before moving to the next.
2. Flexibility to Changes	Agile is highly flexible and allows changes in requirements even during development based on customer feedback.	Waterfall is less flexible because changes after a phase is completed are difficult, time-consuming, and expensive.
3. Customer Involvement	Customers are actively involved throughout the project by providing regular feedback after each sprint.	Customer involvement is mainly at the beginning and the end, with very little interaction during development.
